

LIASYS 450 USER INTERFACE

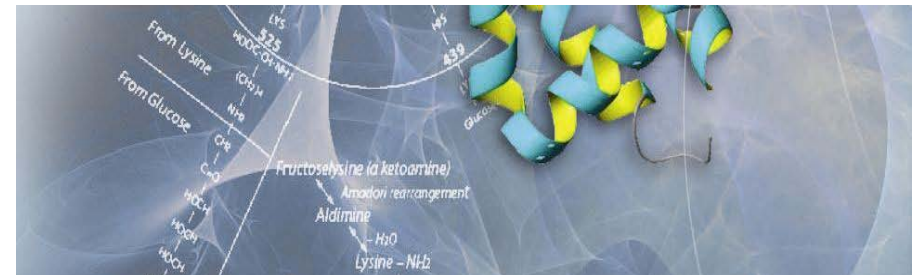

Innovative and simple this system interface provides the operator with immediate operation status and update.

By graphically representing the key analyzer sections, the LIASYS 450 interface provides immediate feed-back to end users by allowing "at a glance" update of all system operations.

This includes reagent levels and positions, samples positions, available results, time to tests and work-list completion, remaining tests and durable cuvette status and all necessary information.

Color coded flags and icons, continuous loading sample racks make the LIASYS 450 extremely powerful and easy to run system.

INTUITIVE GRAPHICAL USER INTERFACE
